

The day will start dry and workable before a frontal boundary approaches midday. Since yesterday, the timing remains the same but it appears to be weaker. So, from 11AM - 3PM we will likely see some rain, but will be light and only last for 1 - 2 hours... Conditions turn hot and humid tomorrow through the remainder of the week. Afternoon thunderstorms will be possible both Tuesday and Thursday, but neither day looks to be a washout. Severe weather (gusty winds) will be a threat Tuesday.

HAZARD OVERVIEW			
Hazard	Mon	Tue - Wed	Description
Severe Weather	None	Moderate	Tuesday afternoon storms may develop into a line, with a 40 - 60 mph wind threat
Flooding	None	Low	Storms Tuesday afternoon may be briefly heavy, but any problems will be very isolated
